Liquid vitamins

The Success products are liquid and concentrated vitamin products covering a number of needs for vitamin supplement depending on animal species and production.

The Success products can be applied in the following ways:

- Application for individual animals on top of the feed ration.
- In drinking water systems – please note that animals always should have access to clean and fresh drinking water.
- In liquid feed mixtures

The Success products are not suited for mixing into dry feed. In dry feed a dry vitamin product of the Suplex range from Vitfoss should be used.

Success ADE-60000/Selenium

Former Red Success

Success ADE 60000/Selenium is optimised according to the need of the cattle for the fat-soluble vitamins A, D and E. The fat-soluble vitamins are deposited in the body and thus they do not need to be applied daily.

Available in 1, 5 and 20 liters

Liquid vitamins

Success B-Complex

Former Green Success

Success B-Complex has a high content of all important B vitamins. Success B-Complex can be used for all domestic animals. The extra supplement of vitamin B often has a positive effect on symptoms such as: reduced growth, poor appetite, bad general condition and problems with skin and coat. Use Success B-Complex for 1-2 weeks and in most cases the animals will recover after this period - especially when the issue is intestinal disturbances. Success B-Complex has to be applied daily, because the animals are not able to deposit water-soluble vitamins.

Available in 1, 5 and 20 liters

Success Multi/Selenium

Former Blue Success

Success Multi/Selenium is a broad-spectrum product with vitamins A, D, E, K, C and the most important B vitamins and selenium. The product can be used as an overall vitamin supplement, because of the content of all essential vitamins. In situations where the animals are stressed e.g. during transfer an extra supplement can be profitable.

The product can be used for ruminants if you want to apply B vitamins together with the normally used fat-soluble vitamins for cattle A, D and E.

Available in 1, 5 and 20 liters

Liquid vitamins

Success E-50000/K/Selenium

Former Yellow Success

Success E 50000/K/Selenium is a vitamin E supplement with vitamin K and selenium. Extra supplement of vitamin E enhances the immune system in general, which means reduced disease frequency. Often vitamin E can counter sudden deaths and weak or stillborn progeny. Selenium supplements and supports the function of vitamin E.

Vitamin E also works as antioxidant and therefore it can be used profitably at feeding with freshly harvested grain.

Vitamin K is added since practical experiences have shown that the need for vitamin K is increased by application of extra vitamin E. Vitamin K affects the blood's ability to coagulate, which can be very important by diseases causing internal haemorrhage.

Available in 1, 5 and 20 liters

Liquid vitamins

Success E-50000 d-alpha & Success® E-100000 d-alpha/Selenium

Former Yellow Success Special & E-100 with selenium

Success E 50000/100000 d-alpha/Selenium is a vitamin E supplement with natural vitamin E. Supplement of vitamin E enhances the immune system, which means reduced disease frequency. Often vitamin E can counter sudden deaths and weak or stillborn progeny.

Natural vitamin E is more digestible than synthetic vitamin E especial among ruminants and piglets in the first weeks after weaning and among mink around mating and while their kits are small.

Available in 1, 5 and 20 liters

Success Mink EKC/Selenium

Liquid vitamin E, K and C with Selenium

Success Mink EKC/Selenium is an all-around vitamin, that provides the mink with vitamin E, K, and C. Success Mink EKC/Selenium can be used in the whole production cycle, from preparing the mink for mating, to the last fur moult before pelting.

Vitamin E, K and C, can help prevent greasy kits, stressed mink, yellow fat disease and poor reproduction.

Recommended dosage:

Mink (per kg feed) 2-3 ml/kg

The lowest norm to be applied in case of minor problems and for prevention purposes. The highest norm to be applied in case of major problems. The compound is only to be used with max. 37.5 g/kg of the daily feed ration.

Available in 1, 5 and 20 liters
